

Managing Cyber Security in Work from Home Situation

Sector: ITES

Company Overview

An ITES company dealing with a lot of company for providing their essential services. They were providing the essential IT services along with website development, and application development. They had the following wings - IT Engineers, Developers and Testers each having stalwarts of its kinds. Apart from these they also had marketing, sales, operations, management and finance team.

The Challenge

The worldwide pandemic situation due to Covid-19 had compelled all companies to send their workforce to home. Everyone had to adapt to work from home situations and it was getting impossible to track the security posture and the security events of the organisation. Hackers were continuously targeting the weakest links i.e. the humans to breach the security of the organisation.

The Solution

With the easy deployable nature of ZERON, all of the devices being accessed and used from home were brought to visibility in a single dashboard in ZERON where the security status of each particular device could be checked remotely without any hassle. Also the different department security posture was made visible with the endpoint group feature of ZERON.

Results

Within a month we measured results post the implementation of ZERON. Here are the highlights of the KPI's.

ATTACKS DETECTED

165

PRIME TARGETS

**CxO's &
Management**

BREACH PROBABILITY

0.3

Previously it was 0.9
